

ARTIFICIAL INTELLIGENCE

Things to be excited and concerned about

The simple definition of Artificial Intelligence is the theory and development of computer systems able to perform tasks that normally require human intelligence

EVERYDAY APPLICATIONS

Navigation Apps
Facial Recognition
Assistants like Siri, Alexa
Media Recommendations
Online Banking

PERFECTING HUMANS

AI can complete routine tasks easily, can work at all times, and makes fewer errors than humans

\$267 BILLION

This is the expected global market value for AI by the year 2027

50%

This is the percentage of consumers that are now optimistic about Artificial Intelligence

PRODUCTIVITY

More than half of businesses have reported an increase in productivity since implementing AI

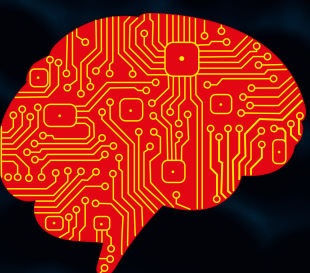

COST BENEFITS

44% of organizations have reported that they are saving money after they started using AI

WILL HUMANS BE NECESSARY?

If AI is smarter than us, makes less mistakes, can work unlimited hours, and doesn't get paid a salary, then why would humans be needed.
