WHATS THE DEALIO WITH A.I

- - - - - - - - - - -

The Benefits

Medical Progression

Modern medicine is using A.I with helping doctors and nurses diagnose and treat patients without having a time-consuming and expensive hospital visit

Customer Service

Many companies now use online chatbots to make responding to and solving problems for customers a simpler process

Minimizing Errors

When A.I learns different algorithms it is helping determine potential errors and make corrections for different companies who use it

### Help Eliminate Tedious Tasks

Human workers are not fans of repetitive and tedious tasks. artificial intelligence has the ability to reduce the dull work in many tasks.

THE DOWNSIDE OF A.I

● ● ● ● ● ● ● ● ● ●

Making Humans lazy

A.I is making humans lazy with automating the majority of work. While humans tend to get addicted to these machines doing tasks for them

Unemployment

A.I is replacing the majority of repetitive tasks and many other works. A lot of organizations and businesses are looking to replace human workers with A.I robots

Biased and Discriminatory Algorithms

Design floaws or faulty and imbalanced data can be fed into algorithms and can lead to biased software and technical artifacts

Being Emotionless

Most people love the human interactions when trying to get help. It helps with anxiety and to calm down if there is someone talking to you with human emotions you can talk to you through something. With A.I there is no emotion at all and it can be very unsettling when you are trying to get something fixed
