AI: ADVANTAGES AND DISADVANTAGES

"THE PRESENCE OF AI IS RESHAPING OUR WORLD, AND EVERY DAY MORE JOB OPPORTUNITIES— FROM DATA SCIENTISTS TO INFORMATION MANAGERS TO SOFTWARE DEVELOPERS —ARE OPENING TO NEW EMPLOYEES."

BENEFITS OF AI

AI will help tasks become completed a lot faster. AI is also able to double task and it makes the workload easier for others
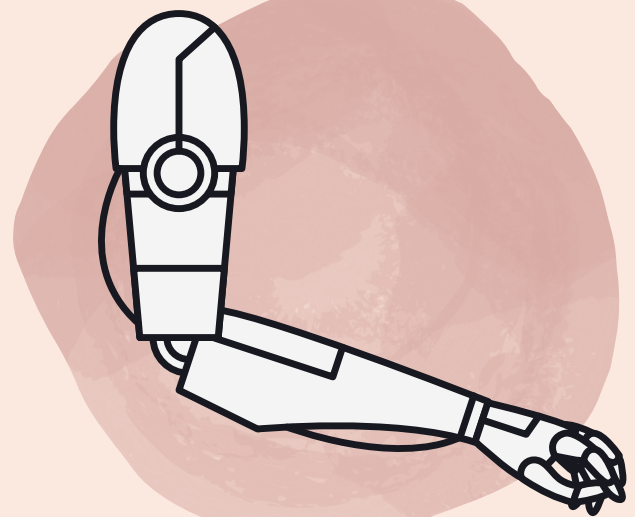

AI also can work 24/7 without any breaks or interruptions

AI has been able to help many occupations including doctors and nurses. AI helps to diagnose without expansive doctors visits. This makes it so doctors and nurses can focus more on the patients needs

AI also helps because there is a reduction in human error. Humans are able to make mistakes while doing certain work. AI has zero risks, which means there is a much less likely chance for AI to make a mistake.
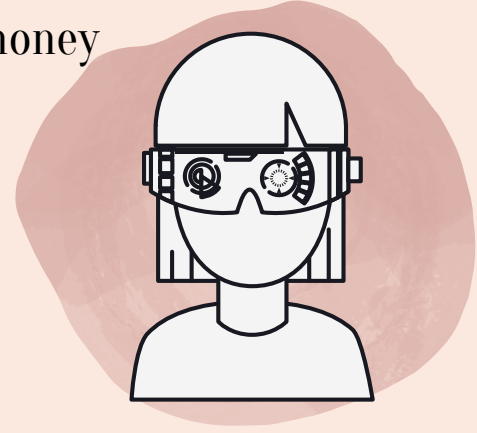

AI also is capable of being able to perform multiple tasks of differently abled individuals. This is a benefit because it is able to perform many more skills than a human would be able to perform
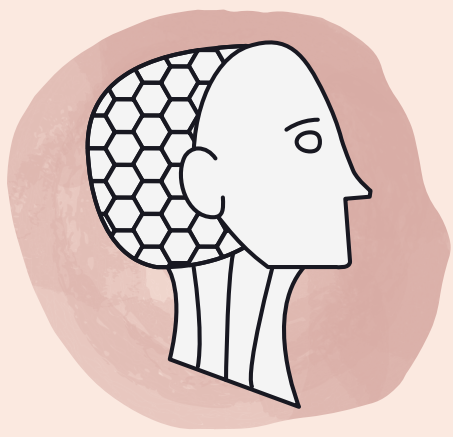

Dangers of AI

One danger of AI is high costs. AI requires a lot of time and resources and that can end of costing a whole bunch of money

"A classic example is the bot Quill who can write Forbes earning reports. These reports only contain data and facts already provided to the bot. Although it is impressive that a bot can write an article on its own, it lacks the human touch present in other Forbes articles. "
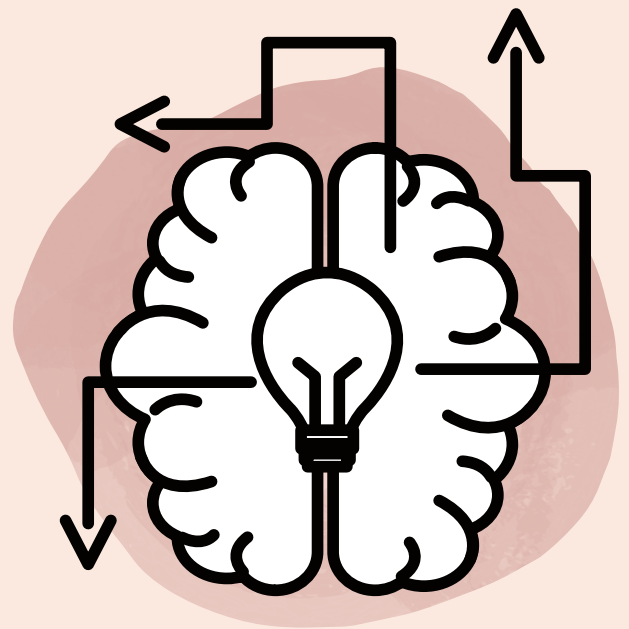

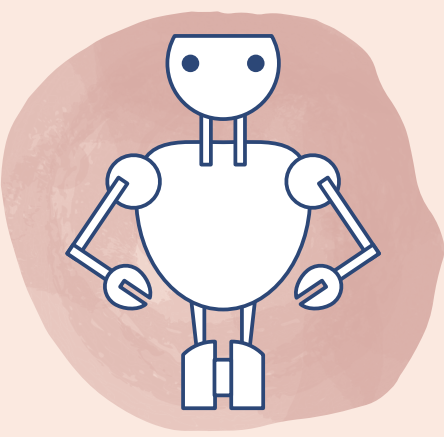

A big disadvantage of AI is that it cannot learn to be creative like humans can. AI is capable of learning over time with pre-fed data and past experiences, but cannot be creative like humans are able to.

One application of artificial intelligence is a robot, which is taking over jobs and increasing unemployment in a few cases. Therefore, some claim that there is always a chance of unemployment as a result of robots replacing humans.

AI applications automate the majority of tedious and repetitive tasks. Since humans do not have to memorize things to get the job done, humans will use their brains less and less. This addiction to AI can cause problems to future generations.
