

A Future with AI

PROS

- Eliminates human error
- Provides assistance in certain work fields
- Decreases work loads

CONS

- Training a single AI system can emit over 250,000 pounds of carbon dioxide
- Unemployment
- Lack of personality in the creative field

How could AI effect our future?

With artificial intelligence automating all kinds of work, we can think of a more comfortable future for ourselves that will create new jobs and not displace them. According to a report on the Future of Jobs by World Economic Forum, AI will create 58 million new artificial intelligence jobs by 2022

Artists thoughts on AI...

"Definitely, we'll be losing the human aspect of collaboration,"
-Raffy de Guzman

"Who gets the credit will also be an issue, comic artist and illustrator"
-Andoy Edoria

Fun Fact

Today's AI can achieve very high performance if it is focused on either precision, or recall. In other words, it optimizes one at the expense of the other [i.e., fewer false positives in exchange for more false negatives, and vice versa]. But when it comes to achieving high performance on both of those simultaneously, AI models struggle. Solving this remains the holy grail of AI...
