

AI IS OVERRATED

How?

1. No Concrete Definition

The definition of what is Artificial Intelligence is up to interpretation. Companies can use this to take advantage of consumers.

2. Just For Show

Many companies are only focusing on AI because it is what is "cool", there is no real value except what is new and popular, which will change in time.

3. The "Paradox of Speed"

Technology is everchanging, and most companies will not be able to keep up with production- no value will be created in these technologies.

4. Algorithm Trust

"Blind trust" is created in these algorithms. This poses a risk in businesses using AI-related technologies.

5. Partnership Gaps

There will be a gap between the management team and data scientists working together behind AI due to differing views, the leaders will trust in the algorithms.
