

# Will AI replace our Jobs?

AI is getting smarter and more advanced every day. Many people believe that soon their jobs will be replaced by machines, and this is not far off from the truth. However some argue that there will be new jobs created because of this.

“Accountants, factory workers, truckers, paralegals, and radiologists — just to name a few — will be confronted by a disruption akin to that faced by farmers during the Industrial Revolution,” he wrote. “As research suggests, the pace in which AI will replace jobs will only accelerate, impacting the highly trained and poorly educated alike.”

When will this happen?

"According to the World Economic Forum's 'The Future of Jobs Report 2020', AI is expected to replace 85 million jobs worldwide by 2025.

Though that sounds scary, the report goes on to say that it will also create 97 million new jobs in that same timeframe."

What are some Benefits?

“There’s always a concern that technology is displacing this current body of workers or tasks, and that’s true, 'But what always happens is that work, and that output, gets redirected to things that are much more productive.'”

What Jobs could be created?

“Up to this point, technology has created more work because it’s another thing you have to deal with,' says Justin Adams, formerly CEO at Digitize.AI and a vice president at its new Chicago-based parent company Waystar." "Even now, armies of people around the world are involved in the development of AI. Per a recent New York Times story on the subject, 'A.I. researchers hope they can build systems that can learn from smaller amounts of data. But for the foreseeable future, human labor is essential.'”
